Adults with an FASD diagnosis experience a high number of health problems. These problems often occur at a young age. The struggle to secure appropriate healthcare can compound health issues being experienced. This activity will explore FASD as a whole-body disorder and will describe the increase of health issues for individuals with FASD compared to the general population. Expert faculty will share results from the groundbreaking 2017 FASD Health Study.

Objectives

- Explain FASD as a Whole-Body disorder
- Discuss the concept of self-agency for the adult with an FASD diagnosis.
- Describe the biological health problems that may present early in adults with an FASD diagnosis

Credits

CNE, CEU, CO, Psychologists, NCASPPB SS (NCASPPB pending)

Fees:

$25; $10 for parents/guardians of persons with an FASD diagnosis or individuals with an FASD diagnosis
